

Automobile Supply Chain Summit ——Future Supply Chain Resilience

Host by Ningbo China Institute for Supply Chain Innovation

Lynk&Co Auto, Geely Auto Group

China is world largest automobile manufacturing base and market with the most complicated supply chain network. In advent of new information technology age, the global automobile economy comes to digitization, informatization and intelligentization times. Many of Global leading automobile enterprises establish global supply chain industrial internet network to collaboratively satisfy customers' unique and uncertain demands. Meanwhile, unexpected political or natural interruptions occurs and impact the global supply chain system such as Sino-US Trade war and the pandemic of COVID-19. Chinese government issued a set of policy to actively execute the digitalization transformation and formulate various emergency plans to maintain the stable development of automobile industrial system.

Supply chain resilience management is a mechanism and process to react to the uncertain interruptions and quickly restore supply chain function and order. We could see many new Chinese automobile manufacturers emerges, the whole automobile industry illustrates some features like electrification, autonomous driving, urban mobility sharing and connectivity. The new auto brands show strong competitiveness. The resilient supply chain will play an significant role, so that the new supply chain infrastructure will be even more robust than ever. This conference will focus on discussion about developing automobile industry supply chain resilience in the long-term strategic perspective.
